About the Talk

Every nation is vulnerable to new forms of terror attacks ranging from cyber attacks to attacks on military bases. Wars in the Twenty First Century will increasingly require all elements of national power and not just the power of military. They will require that economic, diplomatic, financial, law enforcement and intelligent capabilities work together. The threat of terrorist attacks against any nation and its interest around the world has become its most pressing security concern. More so this aggression in future would include every form of cyber attacks. Cyber attacks are increasing in volume, sophistication and coordination. This necessitates every netizen to be exposed to Information Warfare.
