Abstract of the Lecture

Operations Research(OR) had its heydays during 60's to 80's and from 90's it started to decline with attention moving to CS. With core algorithms behind key ideas in computing today (Google search, Face book connections, Twitter feeds, Network routing) and Analytics re-appearing in the form of "Big Data" OR will see a resurgence in the years to come. This talk will trace some of these developments.

Programme: 3.00: Lecture:: 4.30 : Tea
